

Communal Water System

A water station that supplies water to communities during water shortages.

It is easy to install and perfect for schools, clinics, community centres - any central location where there is no or an insufficient supply of piped freshwater and drinking water. The tank can be filled up with water from a water tanker or borehole with minimal maintenance required.

FEATURES

01

JoJo water tank installed on a 1.5m high tank stand

02

All pipes and taps are included

03

Anti-theft system on taps

04
