

First Flush Rainwater Diverter

- Improves the quality of harvested rainwater
- All-inclusive and easy to install
- Allows for installation horizontally or vertically
- Simple and effective
- Little maintenance required

Flushes away the initial, most contaminated flow of rainwater and directs clean water to your tank.

The first flush rainwater diverter diverts the first flow of rainwater, which may contain contaminants from the roof and gutters, into a diverter tube that seals off once full. It then directs the rest of the rainwater into your water storage tank. A flow control valve ensures that the chamber can be emptied out after each rainfall, or as needed.

Specifications

Item code: FIRSTFLUSH

Package dimensions in mm:

150 (h) x 210 (w) x 127 (l)

Pack contents: 1 x 110mm T-junction,

1 x sealing valve and 1 x flow control valve and cap.

Package weight: 0.5 kg

Availability

Stock Item:

Stock items are subject to a 7 day calendar lead time.

Pair with our Rainhead

It is advised to install a rainhead before a first flush as it directs leaves and larger debris away from the flow of water, aiding in the prevention of debris build-up inside the first flush diverter tube and tank.
