

JoJo Scale and Corrosion Inhibitor Features & Benefits

- Ideal for water of low to medium hardness
- BPA-free, food-grade material
- Protects pipework
- Prevents corrosion
- Reduces energy consumption
- Environmentally friendly

Solar systems

Air conditioning

Underfloor heating

Heat exchangers

Appliances

Hot water systems

Scale and Corrosion Inhibitor

A water conditioner that reduces the level of water hardness to protect your pipework and appliances.

The JoJo Scale and Corrosion Inhibitor can be used at a single point-of-entry (for example, under a sink) or it can be connected to the main water supply line to treat water used throughout the home.

Simple to install, this unit is ideal for water of low to medium hardness and can be used to protect a wide range of appliances and systems such as solar devices, air-conditioners, heat exchangers and more.

Phosphorus Silicon Crystals

Important: these crystals are placed inside the Scale and Corrosion Inhibitor housing, and have to be bought separately and are not included with the housing.

Scale and Corrosion Inhibitor Specifications

Item code: JJ-SI01
Weight: 1,6 kg
Height: 276 mm
Width: 133 mm
Length: 138 mm

Phosphorous Silicon Crystals Specifications

Item code: JJ-SI01-R
Weight: 0,545 kg
Height: 240 mm
Width: 50mm
Length: 160 mm

Important

The water treated by the Scale and Corrosion Inhibitor is not safe for consumption and should be filtered by one of our other Disruptor™ Filtration Products before drinking. This unit makes use of phosphorus silicon crystals that have to be placed inside the housing and are sold as a separate item.
