

# Tank stand installation guide

## for vertical and silo tank stands

### INSTRUCTIONS

1. Level the ground as evenly as possible.
2. Place the frame on the ground where you want to install the tank stand.
3. Mark the four by one square meter foundations on the ground.
4. Dig the four foundations 1m deep.
5. Place 50mm spacers on the ground and place the tank stand on top of the spacers.
6. Place a spirit level on the tank stand and set it level on all 4 corners.
7. Make sure the tank stand is firm on the ground and cast the cement around the metal legs of the stand until the cement is level with the ground.
8. Leave the cement to dry for 7 days, then place the tank on top of the stand and tie it down with the ropes on the corners.
9. Leave the stand and tank for 14 days before filling the tank up with water.

**Please note, each tank stand has a very specific Engineer's Certificate and technical drawing based on the size, which should be read in accordance with these instructions.**

If you do not have these documents, please contact us and we will gladly send them to you.
