

Bacteria Water Test Kit

Instructions for use

Aug 2026

Water Safety Made Easy

This Kit Tests For:

- ✓ E. coli
- ✓ Coliform Bacteria

- ✓ DIY water testing made easy
- ✓ Test any water source
- ✓ Detects harmful bacteria in your water
- ✓ Simple to use, no special equipment required

This Kit Includes:

1. 1x Glove
2. Bacteria Screening Test (iWaterScan Test)
3. Bacteria Detailed Test
 - A. Petrifilm Test
 - B. Sample Bottle
 - C. Plastic Syringe

Bacteria Screening Test

How It Works

Put the glove on the hand handling the water sample:

1. Fill the container labeled 'iWaterScan' with water to the fill line
2. Close and shake well
3. Leave in a warm, dark place for 36 hours (such as a cupboard or drawer)

Test Results

Check after 36 hours.

Safe	Not Safe
Water turns yellow	Water turns black

Detailed Bacteria Test

How It Works

Put the glove on the hand handling the water sample:

1. Rinse the container labeled 'sample bottle' and fill with water
2. Use the syringe to take 1 ml of water
3. Remove the petrifilm from the foil and lift the top layer
4. Place 1 ml of water in the red circle
5. Gently close the top layer to spread the water across the red circle. Do not press down or allow water to spill outside the circle
6. Wait 1 minute for proper absorption (for best results)
7. Return the petrifilm to the foil pouch to protect it from direct sunlight (exposure may affect results)
8. Keep in a warm place (35–50 °C), such as a sunny windowsill or on a car dashboard

Test Results

Check after 48, 72, and 96 hours.

Safe	Not Safe
1 red spot or less No blue spots	2 or more red spots Any blue spots

Unsafe results may appear within 48 hours. For accurate final results, please wait 96 hours. If any test indicates unsafe water, do not drink the water.
